NOTES ON COLOR SELECTION

The color chips shown are representative of a smooth troweled finish. The top half of the chip is unsealed; the lower portion represents concrete sealed with a solvent-based sealer such as Kingdom Cure, Regal Gloss or one of our Kingdom Guard Sealers.

Concrete is a natural material. Sand, cement and aggregate all vary in different regions and from different plants. Different finishing techniques, textures, sealers, water content, weather-related jobsite factors and curing methods can all affect the final shade result. Keep in mind that concrete colorants are not paint products, where an exact match is always easy or even possible. The color chips shown attempt to represent the shades as closely as possible, but Kingdom Products cannot guarantee an exact match because of the factors mentioned above. Our recommendation is always to prepare a sample prior to final color selection.
